

Aerial Work Platforms

Aerial Work Platforms - There are many accessories intended for lift trucks that can be used in order to help expand the capabilities of your lift truck and allow you to lift things, handle materials with greater ease or to accomplish clean-up tasks.

A few accessories were specially meant for the forks themselves. For example, blade extensions are used when you require a lot more blade length, that increases lifting capability. Fork extensions come in lengths ranging from 48-120 inches. Triangular or rounded attachments are one more type used whenever transferring rolled material in order to make sure it does not roll off of the standard flat forks.

Lifting attachments can be pivoting and telescoping crane attachments. They come in many styles. These accessories are normally meant for transporting lumber, metal bars, poles or whatever type of bulky things. Additional accessories like for instance different styles of hooks and hook plates are existing so as to lift stuff making use of a sling or chain. Magnetic lifters and slab lifters are other things that can be used along with hook accessories. Slab lifters are specialized accessories that are intended for lifting various materials that are delivered in a sheet or slab format. Rug rams or carpet poles are other lifting tools that attach to your lift truck to be able to make transporting rolls of carpet much easier. The accessory hooks onto the forklift's blades and has a pole that goes through the center of the carpet roll.

There are numerous other kinds of lift truck attachments that can be utilized for facility maintenance like for instance snow forks. These blades attach to front end loaders and can move materials like for example snow, dirt and soil. Other common cleanup accessories consist of magnetic sweepers and standard sweepers. Standard sweepers consist of a broom which the forklift forks connect onto for sweeping large spaces like for instance parking lots or warehouse and factory floors. The magnetic sweeper is similar except that it has a magnetic plate rather than bristles. The magnetic sweeper is used in places where there is lots of metal debris such as on shop floors for example. Sweepers have widths as much as 60 inches and this surface area makes clean up fast and simple.

A material spreader is one more lift truck attachment that is usually used at facilities. These spreaders are helpful for various applications like for instance spreading insecticides, seeds, ice melt, rock salt, pellets and fertilizers.

Another optional lifting attachment are work platforms. These could be utilized by many various businesses on a daily basis. Platforms may differ in size from 36" x 36" to up to 60" x 60". A few models may be existing and are capable of folding up and storing into a smaller place. Work platforms are designed to raise staff up to an overhead location using the forklift. Larger platform models have extra space for personnel to carry tools and other necessary objects meant for the task. Usually work platforms are constructed of steel or ploy material.
