

Carriage Rollers

Carriage Rollers - Carriage rollers are specifically designed bearings which are used on lift masts in order to help them perform within difficult environmental surroundings. Lift masts are often subjected to shocks, oscillations, high dynamic and vibrations and static loads. This equipment is regularly exposed to environmental influences such as dust, cold, heat, aggressive ambient air, moisture and contamination. Therefore, the lift masts' guidance arrangements should be particularly tough and have a particular high load carrying capacity.

Carriage rollers have been created as the answer for working in different environmental surroundings. These bearings are the answer where the guidance arrangements of the lift masts have to be economical and maintain operational security while having the capability to handle a particularly high load carrying capacity.
