

Barrel Clamps

Barrel Clamps - A Barrel Clamp is actually a mechanical or hydraulic accessory intended for a forklift. It could be used so as to compress the item you want to move with the forklift and is typically used for handling paper rolls, barrels, and kegs. A few types of barrel clamp accessories also have a rotate function. For example, the rotate function permits the one operating the forklift to be able to slot in a vertically stored paper into the horizontal intake of a printing press.
