

Remanufactured Lift Truck Parts

Remanufactured Forklift Parts - Lift trucks are rather expensive pieces of equipment in view of the fact that a brand new electric lift truck model could cost starting from \$18,000 to \$25,000, for a five thousand pound equipment. In addition, some thousands of dollars would have to be invested in a battery battery and charger. The same internal combustion forklift of similar lift capacity would cost slightly less and the diesel models which are capable of heavier lifting capacities can cost upwards of \$100,000. Reconditioned lift trucks are an option to save much cash in view of the fact that they cost less than half the price of brand new models.

Some buyers may be skeptical about buying a used or reconditioned lift truck since they feel they will have to spend more on repairs. Nonetheless, a properly reconditioned lift truck would be able to operate just in addition to a new one. Even though your lift will get heavy use, so long as you take proper care of the equipment, it will serve all your requirements and likely save you a lot of cash.

It is important to determine what the seller means by a reconditioned or refurbished forklift when thinking about buying a second-hand forklift. Numerous businesses do a really good job reconditioning a unit prior to selling it. This comprises disassembling the lift truck, rebuilding the engine, sandblasting the lift and then reassembling the whole thing and finishing with a fresh coat of paint.

To correctly and thoroughly reconstruct a forklift engine, a good company will absolutely disassemble it. A heat cleaning system could then be utilized to clean all the components. Once this step has been completed, all of the components are checked to see if they have any defects, any breakage or any extensive wear. Specific components like for instance cylinder heads, crankshafts, cylinder blocks and connecting rods are reground, resurfaced and resized if necessary. Several components such as gears, nuts, bolts and so on. are replaced or repaired as considered necessary.

The engine is rebuilt by hand once the overhaul has been finished. After putting it back together, a series of tests are applied to the running machine. This is done in order to check all of the components to guarantee there are no problems or leaks. If any problems occur, the necessary alterations are made.

There must be no reason to be concerned about purchasing a refurbished or reconditioned lift truck from quality sellers. The process of rebuilding the equipment guarantees the utmost in dependability. Maintenance costs can really work out to be less for the reason that you would avoid the initial phase of higher maintenance projections which a brand new lift truck has as it is broken in. By following routine maintenance schedules and taking care of the equipment properly, a reconditioned forklift would serve you well.
